VIVEKANAND KUMAR

Aspiring Data Analyst • Python • SQL • Data Visualisation • Machine Learning

+91-8651240027 | vivekanandkumar865124@gmail.com | GitHub | LinkedIn

EDUCATION

B.Tech — Computer Science & Engineering 2022 – 2026

Greater Noida Institute of Technology | CGPA: 7.06 / 10

CAREER OBJECTIVE

Data Science enthusiast with hands-on, project-based experience in Python, SQL, EDA, and data visualisation. Built and shipped 10+ independent projects covering API-driven data pipelines, statistical analysis, and SQL-based data cleaning — including a 154-country live weather pipeline and a 30,000-row job market analyser. Seeking a Data Analyst role to apply strong analytical and problem-solving skills to real business data.

TECHNICAL SKILLS

Languages: Python, SQL
Data Libraries: Pandas, NumPy, Scikit-learn
Visualisation: Matplotlib, Seaborn
Databases: SQLite, MySQL
AI / LLM: Ollama, RAG, ChromaDB
Concepts: EDA, Statistics, Probability, Data Cleaning, API Integration
Tools: Jupyter, Git, GitHub, Streamlit

PROJECTS

Indian Job Market Analyser | *Python • Pandas • Matplotlib • Seaborn*

- Analysed 30,000+ real Naukri.com job postings to surface in-demand skills, top hiring cities, and industry distribution
- Built a reusable skill-extraction pipeline (string split + explode) to rank the top 20 most-demanded technical skills
- Delivered 4 charts (bar, pie, horizontal bar) and a written business-insight summary on hiring trends

Global Weather Data Pipeline | *Python • Requests • Geopy • SQLite • Seaborn*

- Built an end-to-end ETL pipeline: live OpenWeatherMap API → geocoding (Geopy) → cleaning → SQLite → visual analytics, covering 154 countries
- Produced a correlation heatmap and ranked bar charts to identify the hottest, coldest, and cloudiest countries

Messy Data Cleaning Pipeline (SQL + Python) | *Python • Pandas • SQLite • SQL*

- Cleaned a 10,000-row dataset containing 3 distinct null patterns (NaN, 'ERROR', 'UNKNOWN' strings) hidden from standard null checks
- Recovered 1,400+ otherwise-lost values using formula-based imputation (Total = Quantity × Price) instead of generic mean/mode fill
- Loaded cleaned data into SQLite and wrote GROUP BY / ORDER BY SQL queries to extract item- and payment-wise revenue insights

Student Performance EDA | *Python • Pandas • Seaborn • Statistics*

- Performed full exploratory data analysis on a 1,000-student dataset; computed correlations across test scores and demographic factors
- Identified that completing a test-prep course improved average scores by up to 10 points; documented 3 key, data-backed findings

RAG Interview Prep Agent — Swami | *Python • Ollama (Llama 3) • ChromaDB • RAG*

- Built a fully offline AI interview-prep agent using a Retrieval-Augmented-Generation pipeline with semantic search
- Integrated ChromaDB as a local vector store with a locally-hosted Ollama LLM — no internet or API dependency, zero cost

KEY HIGHLIGHTS

- Completed LeetCode SQL 50 — solid foundation in JOIN, GROUP BY, window functions, and subqueries
- 10+ independent Python projects covering data cleaning, EDA, API integration, SQL, and applied statistics
- Public GitHub with all projects documented: github.com/VivekanandKumar001

TRAINING & CERTIFICATES

AI / ML Training Program 2024

Greater Noida Institute of Technology — supervised & unsupervised ML, neural network basics, Python data pipelines

Certificates: Python Coder — Kaggle | Dataset Creator — Kaggle
